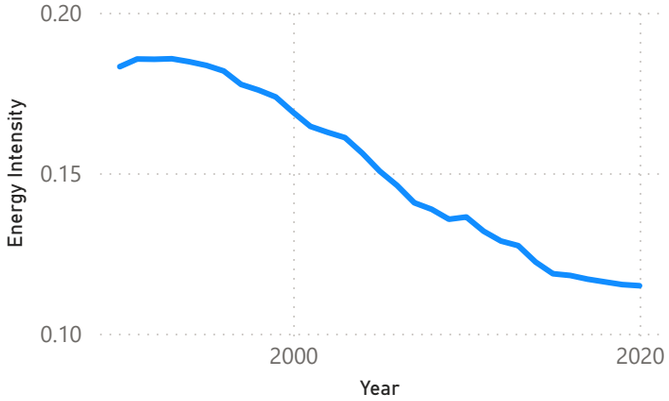
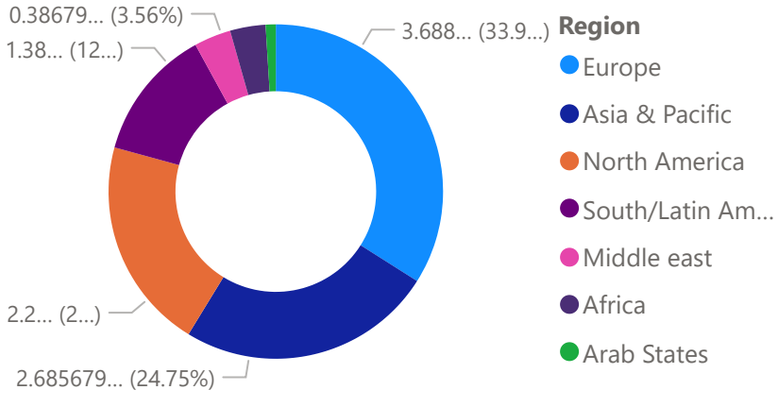
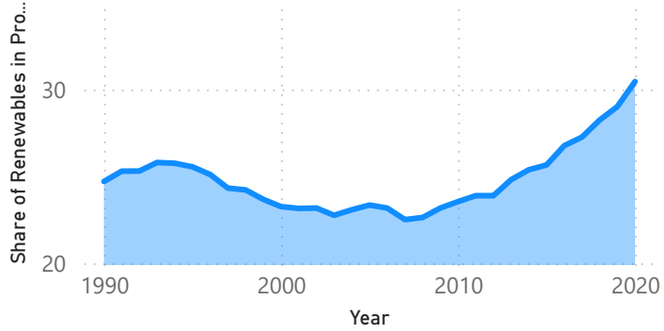
Energy Intensity by Year



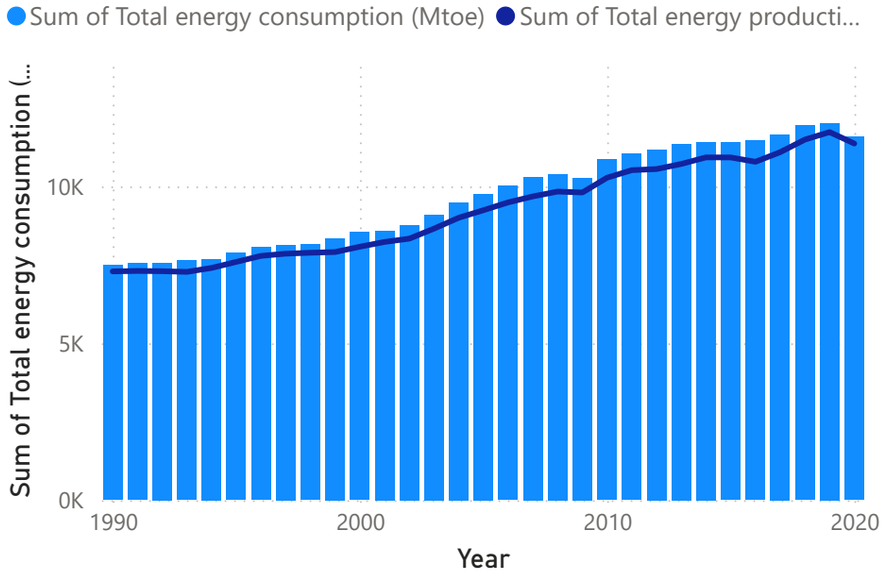
Share of Wind and Solar by Region



Share of Renewables in Production by Year



Energy Consumption vs Energy Production



Conclusion

1. The downward trend in energy intensity shows significant improvements in energy efficiency.
2. Share of renewables is increasing, marking progress in the clean energy transition.
3. Total energy production and consumption are stable, ensuring energy security.
4. Share of electricity is growing but requires further acceleration to reduce fossil fuel reliance.
5. Differences in wind and solar adoption highlight opportunities for targeted action.
